(a) Consider these three transactions:

- T1: R1(A), R1(B), W1(A), W1(B), C01
- T2: R2(B), W2(B), R2(C), W2(C), C02
- T3: R3(C), W3(C), R3(A), W3(A), Co3

i. Schedule 1:

R2(B), W2(B), R3(C), W3(C), R3(A), W3(A), C03, R2(C), W2(C), C02, R1(A), R1(B), W1(A), W1(B), C01

Is this schedule conflict-serializable? If yes, indicate a serialization order.

ii. Schedule 2:

R2(B), W2(B), R3(C), W3(C), R1(A), R1(B), W1(A), W1(B), C01, R2(C), W2(C), C02, R3(A), W3(A), C03

Is this schedule conflict-serializable? If yes, indicate a serialization order.

(b) Consider the following three transactions:

T1: R1(A), W1(B), Co1
T2: R2(B), W2(C), Co2
T3: R3(C), W3(D), Co3

Given an example of a conflict-serializable schedule that has the following properties: transaction T1 commits before transaction T3 starts, and the equivalent serial order is T3, T2, T1.
